Algebra 1 Direct Variation  
Answer

The equation  $y=4x+1$  represents a linear function. When you input values of  $x$ , you get an output answer or  $y$ . To make a table, enter values of  $x$  and solve for  $y$ . A typical table may look like this:

X	Y
-3	-11
-2	-7
-1	-3
0	1
1	5
2	9
3	13

To make a graph of the function, first sketch your  $x$  and  $y$  axis.

Ok, suppose you had a question such as "Model each rule with a table of values and a graph. If the rule describes a direct variation, state the constant of the variation." And if there was a problem like this:  $y=4x+1$  How would you make a table and graph for it? I am so confused, because my book doesn't explain anything about doing this! I've been looking for how to get this done, but I'm stuck!

If there was a problem that said something like "Model a table and graph using different values. If it is a direct variation, state the constant of the variation."  
What does the constant of the variation mean? I've already got the table and graph done, but I don't quite get what that means.  
Thanks!
