The increasing prevalence of preterm birth in the United States is a complex public health problem that requires

multifaceted solutions. Preterm birth is a cluster of problems with a set of overlapping factors of influence. Its causes may include individual-level behavioral and psychosocial factors, sociodemographic and neighborhood characteristics, environmental exposure, medical conditions, infertility treatments, and biological factors. Many of these factors co-occur, particularly in those who are socioeconomically disadvantaged or who are members of racial and ethnic minority groups. While advances in perinatal and neonatal care have improved survival for preterm infants, those infants who do survive have a greater risk than infants born at term for developmental disabilities, health problems, and poor growth. The birth of a preterm infant can also bring considerable emotional and economic costs to families and

have implications for public-sector services, such as health insurance, educational, and other social support systems. Preterm Birth assesses the problem with respect to both its causes and outcomes. This book addresses the need for research involving clinical, basic, behavioral, and social science disciplines. By defining and addressing the health and economic consequences of premature birth, this book will be of particular interest to health care professionals, public health officials, policy makers, professional associations and clinical, basic, behavioral, and social science researchers.

farm tractor, detailing the entire history of collectible gas tractors. Outstanding photography showcases more than 100 makes and models from 1900 to 1960. Ralph W. Sanders provides in-depth coverage of all famous models along with many before seen tractors, prototypes, and rare variations. He relates the overall trends and engineering developments that led to the manufacture of modern farm tractors, discusses the development of farm tractors as an industry.

and global warming are forcing us to consider alternatives. In this measured and knowledgeable book, energy experts Alan Herbst and George Hopley argue that the time has come for the U.S. to revitalize its nuclear generation assets in order to successfully meet growing domestic electricity requirements and lessen our dependence on foreign sources of energy. Nuclear Energy Now provides an informed look at the benefits and drawbacks associated with this controversial alternative to traditional energy sources. It opens with a brief overview of commercial nuclear development in the U.S. during the past half-century and moves on to discuss what the future may hold if new initiatives-supported by the Energy Policy Act of 2005-gain traction. Along the way, readers will find informed insights into why the need for nuclear power

has become so critical and how we can safely add capacity in the coming years. Exploring all of the issues related to developing America's nuclear energy capabilities safely and cost-effectively, Nuclear Energy Now is a must-read for anyone concerned about our oil dependency, the environment, and future of the nation.

Mineral Processing Design and Operations is expected to be of use to the design engineers engaged in the design and operation of mineral processing plants and including those process engineers who are engaged in flow-sheets development. Provides an orthodox statistical approach that

helps in the understanding of the designing of unit processes. The subject of mineral processing has been treated on the basis of unit processes that are subsequently developed and integrated to form a complete strategy for mineral beneficiation. Unit processes of crushing, grinding, solid-liquid separation, flotation are therefore described in some detail so that a student at graduate level and operators at plants will find this book useful. Mineral Processing Design and Operations describes the strategy of mathematical modeling as a tool for more effective controlling of operations, looking at both steady state and dynamic state models. * Containing 18 chapters that have several worked out examples to clarify process operations * Filling a gap in the market by providing up-to-date research on mineral
