The inclination towards two wheelers is not newer to the world. From the very beginning, two wheelers are recognized as a mark of triumph, independence and joy. These are considered fast, safe and easy mode of transportation with worthy fuel economy. With the arrival of automation and electronics in two wheelers, the study gained more momentum, which led Two and Three Wheeler Technology to emerge as a new discipline of automobile engineering. The book explains traditional and modern technologies in an easy to understand manner. Various technologies have been explicated with appropriate 2D and 3D diagrams to support learning. Text comprises the state-of-the-art developments in the field of two wheelers. Detailed explanation on the actual assemblies helps the students to cognize the technology systematically. Although the emphasis has been given to the two wheeler technology, considering the requirement of various syllabi, the last chapter is solely dedicated to three wheeler technology. Chapter-end review questions help students in preparing them for examination by self-assessment method. Primarily designed for the undergraduate and diploma students of automobile engineering, the lucid and simple presentation of the book makes it useful for the commoner, who has keen interest in this area. It is a useful guide for a vehicle owner for understanding mechanism and parts, which may help him in maintaining his vehicle at best efficiency.

Scooters and scootering are the fastest growing segment of the American motorcycling market. Because of their low cost, ease of operation, and unintimidating nature, scooters are especially appealing to new riders. This book will provide the scooter owner with everything he or she needs to know. It will tell a person what kind of scooter to buy, how to buy it, and where to buy it. It will instruct the owner on maintaining and customizing his or her scooter. It will even help the scooterist find scooter-related events and activities. In sum, this is all the book any scooter owner will ever need.

Asia's premier business magazine. The magazine reports on politics, business, economics, technology and social and cultural issues throughout Asia, with a particular emphasis on both Southeast Asia and China.

How can one survive in a market which is volatile and uncertain? What strategies have worked and not worked in the past? What does it take to be successful in India? What are the successful strategies applied by the likes of HUL, Godrej, Adani Ports and redBus? So what does it take to Ride the Tiger? Sound flexible strategy, operational excellence and dedication to customer-centric innovation. But what does that really mean? How have successful Indian companies managed challenges in an extremely price-sensitive market? In this book, Wilfried Aulbur and Amit Kapoor look at successful, and sometimes not-so-successful, strategies, operations and innovations in India. They have distilled lessons from their decades of practical work experience in the country. From large family conglomerates like Tata and Godrej to newer additions like Adani, from MNCs like Maruti Suzuki to start-ups in Bangalore and Gurgaon—the book explores key learnings from all four kinds of companies in an Indian context and provides useful insights into how business is done in India.

DIVGas prices go up and down, but mostly up, and that trend is likely to continue for the foreseeable future. Because of this, people are increasingly turning to motor scooters. In addition to being entertaining to ride and providing extreme mobility, scooters often travel up to 100 miles for each gallon of gasoline burned. How to Repair Your Scooter is divided into chapters according to the scooter's various mechanical systems. For example, brakes, suspension, intake, exhaust, etc. each have their own chapter. Each chapter begins with a simple explanation of how the subsystem works and what its strengths and weaknesses are. The chapter then takes the reader through a series of common maintenance and repair projects, each illustrated with step-by-step sequential photography with captions. Content covers two- and four-stroke scooters and is relevant for machines from all markets. /div
