Biochemical Methods Are Used In All Branches Of Biological Sciences And Agriculture Is No Exception. Research In Various Branches Of Agriculture Viz. Plant Physiology, Plant Pathology, Agricultural Microbiology Seed Technology Plant Genetics And Entomology Requires One Or The Other Biochemical Methods. A Researcher Has To Refer Many Journals And Books Before He Could Get To The Right Procedure For His Experiment. This Book On Biochemical Methods Attempts To Give Often Used Methods In A Single VolumeThe Book, Divided Into 13 Chapters Contains 115 Procedures. The Chapters Are Carbohydrates, Lipids, Proteins, Nucleic Acids, Vitamins, Enzymes, Nitrogen Fixation Antinutritional Factors, Plant Hormones, Pigments, Phenols Cell Fractionation And Separation Techniques. Each Procedure Is Divided Into Introduction, Principle, Materials, Procedure And Calculation. At The End Of Each Procedure References For Additional Reading Are Provided. Important Precautions, Warnings And Tips Are Given In The Notes Section.The Methods Elaborated In The Book Will Be Useful For Conducting Practical Classes At The Undergraduate And Postgraduate Levels In Science Colleges And Universities. This Manual Will Be A Bonanza For The Research Workers In Plant Sciences Since It Includes Procedures From The Classical Microkjeldahl Nitrogen Estimation To The Modern Southern Blotting Technique.

Though many practical books are available in the market but this Laboratory Manual of Microbiology, Biochemistry and Molecular Biology is a unique combination of protocols that covers maximum (about 80%) of the practicals of various Indian universities for UG and PG courses in Bioscience, Biotechnology, Microbiology, Biochemistry and Biochemical Engineering.

This Manual Is Intended To The Undergraduate And Post-Graduate Students In Microbiology As Well As Botany And Zoology In Which Microbiology Is Being Taught As Ancillary Subject. This Manual Explains Exercises In Simple Terms With Sufficient Background And Principle Of The Experiments. Illustrations Are Provided Along With The Protocols For Effective Understanding The Experiments. This Manual Deals With The Experiments In Basic Microbiology, Microbial Physiology Metabolism, Soil, Agricultural, Water And Medical Microbiology. It Is Expected That Beginners And Graduate Students In Microbiology Will Be Benefited From This Manual.

The book entitled "Prospects in Bioscience: Addressing the issues" is a collection of selected research papers presented at the International Conference on Advances in Biological Sciences (ICABS) organized by the Department of Biotechnology and Microbiology and the Inter University Centre for Bioscience, Kannur University, Kerala, India. ICABS witnessed a unique spectrum of Scientific Programmes on the most recent and exciting developments in modern biology. The conference displayed the numerous breakthroughs and significant developments in the important areas of modern biology and their relevance to the welfare of global society. The Book contains 50 well written chapters, each one discussing scientifically organized findings of original research work done in reputed laboratories. Needless to say, they deal with advances in various disciplines of modern biology including Cell and Molecular Biology, Structural Biology, Industrial and Environmental Biotechnology, Food and Agricultural Biotechnology and Medical Biotechnology. As the title rightly indicates, the chapters project the prospects in the respective areas and the issues in them. Specific issues discussed in the book includes development of transgenic plants, bioremediation of toxic industrial effluents, biotransformation for novel antibiotics, biofertilizer development, molecular drug designing and structure elucidation, molecular identification of pathogens, production of anti microbials, biocontrol agents and bioactive molecules, cancer biology, plant breeding and hybrid seed production etc. The book with its contents spreading across the vast arena of modern biology is expected to cater to the need of researchers, technologists and students.

This book addresses the grave concerns stemming out due to conventional treatment techniques. The main focus of this book revolves round the central kernel of novel technology (bioremediation and biotechnology) which has emerged as an independent warrior to clean up and restore the disturbed environs. Furthermore, this book is a coherent assortment of diverse chapters relevant to the role of biotechnology and bioremediation for restoration of the ecosystems degraded by pesticide and heavy metal pollution. The inaugural chapters deal with the quantification of problem and its magnitude due to pesticides and heavy metals, followed by innovative modern biotechnological and bioremediation treatment technologies and sustainable techniques to remediate the persistent pollutants. It is a detailed comprehensive account for the treatment technologies from unsustainable to sustainable. Academicians, researchers and students shall find it as a complete wrap up regarding biotechnological intervention for sustainable treatment of pollution and shall suffice for the diverse needs of teaching and research.

This edition provides a comprehensive overview of the rapidly advancing field of plant physiology, supplemented with experimental exercises.
