Presented here are 88 refereed papers given at the 35th MATADOR Conference held at the National University of Taiwan in Taipei, Taiwan in July 2007. The MATADOR series of conferences covers the topics of Manufacturing Automation and Systems Technology, Applications, Design, Organisation and Management, and Research. The proceedings of this conference contains original papers contributed by researchers from many countries on different continents. The papers cover the principles, techniques and applications associated with: manufacturing processes; technology; system design and integration; and computer applications and management. The papers in this volume reflect: • the importance of manufacturing in international wealth creation; • the emerging fields of micro- and nano-manufacture; • the increasing trend towards the fabrication of parts using additive processes; • the growing demand for precision engineering and part inspection techniques; • measurement techniques and equipment.

Vols. for 1970-71 includes manufacturers catalogs.

Provides the ideas, guidelines and techniques you need to capture the full potential of your CNC equipment. Nearly every aspect of CNC operations is addressed and the book is organized so you can use it as a step-by-step guide to efficient CNC utilization or as a shop floor reference for continuous improvement. Hundreds of specific utilization-boosting techniques are detailed.

This comprehensive book provides guidelines for maximizing plastics processing efficiency in the manufacture of all types of products, using all types of plastics. A practical approach is employed to present fundamental, yet comprehensive, coverage of processing concepts. The information and data presented by the many tables and figures interrelate the different variables that affect injection molding, extrusion, blow molding, thermoforming, compression molding, reinforced plastics molding, rotational molding, reaction injection molding, coining, casting, and other processes. The text presents a great number of problems pertaining to different phases of processing. Solutions are provided that will meet product performance requirements at the lowest cost. Many of the processing variables and their behaviors in the different processes are the same, as they all involve basic conditions of temperature, time, and pressure. The book begins with information applicable to all processes, on topics such as melt softening flow and controls; all processes fit into an overall scheme that requires the interaction and proper control of systems. Individual processes are reviewed to show the effects of changing different variables to meet the goal of zero defects. The content is arranged to provide a natural progression from simple to complex situations, which range from control of a single manual machine to simulation of sophisticated computerized processes that interface with many different processing functions.

This exciting collection of work introduces a major shift in debates on sexuality: a shift away from discourse, identity and signification, to a radical new conception of bodily materialism. Moving away from the established path known as queer theory, it suggests an alternative to Butler's matter/representation binary. It thus dares to ask how to think sexuality and sex outside the discursive and linguistic context that has come to dominate contemporary research in social sciences and humanities. Deleuze and Queer Theory is a provocative and often militant collection that explores a diverse range of themes including: the revisiting of the term 'queer'; a rethinking of the sex-gender distinction as being implied in Queer Theory; an exploration of queer temporalities; the non/re-reading of the homosexual body/desire and the becoming-queer of the Deleuze/Guattari philosophy. It will be essential reading for anyone interested not just in Deleuze's and Guattari's philosophy, but also in the fields of sexuality, gender and feminist theory.

The Hollywood Drama-Logue raved about "Deus Ex Machina" saying, "The play is a delight, it wonderfully places in perspective the more commercial aspects of the business of belief. ...wonderful vaudeville schtick, outright camp, and a fine understanding of man. ...comic and somehow touching characters in difficult outrageous comedy sequences creating a feeling of real people caught in a surrealistic future space. ...wit, wisdom and downright fun. Bailey makes his point clearly." The San Francisco Bay Guardian called it "One of the best original plays of the year." when it was presented in Berkeley and at the Pacific School of Religion. "Deus Ex Machina" and its prologue piece, "The Hands of the Beholder" are absurd, dark comedies about true believers, religious fundamentalists, and mystics who claim special knowledge of God. They take place in a rapidly approaching future when uncontrollable fervor is leading to a vaudevillian Armageddon. "Deus Ex Machina" is based on the biblical story of "Abraham and Issac". The nuclear family has split on how to find God and save the world. Father and son join on a rampage to unleash the power that is supposed to be contained in calling out the true name of God. The wife and mother warns of the impending disaster that will be the result of their quest. Ignoring her, they rush headlong through a hilarious melee of mystical, religious, and scientific information as they seek to recreate the days when the money flowed and God smiled upon them. "The Hands of the Beholder" sets the stage for the end of the world when anarchist historians urge that each and every person remain vigilant and become aggressively active in choosing the tools to use in creating history they way they think it should be. Together, they describe a time that has become increasing real and menacing, leaving us only with the ability to tell a few jokes and laugh as the world crumbles around us.

This text provides a full introduction to the fundamentals of CNC as applied, in particular, to metal cutting machine tools. The subject is presented within a manufacturing context and the book includes end-of-chapter exercises, programming exercises and a glossary of CNC-related terms.
