be described as the process of reducing uncertainty about solution options by gaining sufficient knowledge of the options to allow a reasonable selection from among them. Uncertainty is reduced, but never eliminated. If that were possible, we would be able to predict the future without error.

~~Decision Making Uncertainty Solution~~

A decision problem, where a decision-maker is aware of various possible states of nature but has insufficient information to assign any probabilities of occurrence to them, is termed as decision-making under uncertainty. A decision under uncertainty is when there are many unknowns and no possibility of knowing what could occur in the future to alter the outcome of a decision. We feel uncertainty about a

Overview. Decision-making can be regarded as a problem-solving activity yielding a solution deemed to be optimal, or at least satisfactory. It is therefore a process which can be more or less rational or irrational and can be based on explicit or tacit knowledge and beliefs. Tacit knowledge is often used to fill the gaps in complex decision making processes.
