Design, Materials,
Fabrication ...

Fabrication is used
for both custom and
stock products. Most
custom metal

fabricated products
are crafted from a
range of commonly
used metals and their
alloys. Some of the
most popular metal

Page 24/45

Second Edition

Access Free Design

Materials available for custom metal fabrication include aluminum, brass, copper, gold, iron, nickel, silver, magnesium, tin, titanium, and various grades of steel.

4. Design for ease of part fabrication. Net shape and near net shape processes may be feasible. Part geometry is simplified, and unnecessary features are avoided.

Access Free Design

Unnecessary surface finish requirements should be avoided; otherwise, additional processing may be needed. 5. Design parts with tolerances that are within process capability.

11 Principles and Guidelines in Design for Manufacturing...

As fabrication

Page 30/45

Second Edition

Access Free Design

process is quite complex the composition of materials which are being used need to have some desired properties. Features of these fabrication materials are stated below:

- o Casting raw material – Casting is a fabrication process which is 6000 years old and, in this

Access Free Design

Method, a liquid metal is forced into a mould which is then allowed to cool so it can harden in the required shape. For applications that need complex geometries it is an ideal method.
