Suspension is probably the most misunderstood aspect of motorcycle performance. This book, by America ' s premier suspension specialist, makes the art and science of suspension tuning accessible to professional and backyard motorcycle mechanics alike. Based on Paul Thede ' s wildly popular Race Tech Suspension Seminars, this step-by-step guide shows anyone how to make their bike, or their kid ' s, handle like a pro ' s. Thede gives a clear account of the three forces of suspension that you must understand to make accurate assessments of your suspension ' s condition. He outlines testing procedures that will help you gauge how well you ' re improving your suspension, along with your riding. And, if you ' re inclined to perfect your bike ' s handling, he even explains the black art of chassis geometry. Finally, step-by-step photos of suspension disassembly and assembly help you rebuild your forks and shocks for optimum performance. The book even provides detailed troubleshooting guides for dirt, street, and supermoto--promising a solution to virtually any handling problem.

Updated with nearly 60 percent new material on the latest racing technology, this book details how to design, build, and setup the chassis and suspension for road race and stock cars. INTRODUCTIONI have written this book for entry to expert level IMCA Sportmod racer. Most of the initial information provided is just a guide and derived from talking with chassis builders, successful racers, conducting years of research, attending various chassis schools and our own trial and error at the track. Not all racers will agree with everything in this guide, but we believe in it and reading and applying the information will help you to maximize your racing results. This book will teach you how setup changes on an IMCA Sportmod will affect the cars handling on the track. There is no one change that will make every car fast, but understanding how each change affects a cars handling is the first step in getting faster and making it to victory lane. The key to being successful on the race track is getting your setup as close as possible in the shop, adjusting your cars handling to the current track conditions and then adjusting your driving style to maximize traction through all areas of the race track. The driver job is to maximize the limited traction a dirt car has on the dynamic changing race track conditions.
