Food Chemicals Codex is the accepted standard for defining the quality and purity of food chemicals. It is frequently referenced by the U.S. Food and Drug Administration and other international food regulatory authorities. This First Supplement to the Fourth Edition provides revisions and updates, reports on changes in tests and assays, and includes an errata section. The supplement also includes 15 new monographs -- including entries on three different whey products and an entry on the recently approved fat substitute Olestra -- plus 35 revised chemical monographs and a number of revised flavor monographs. Entries include physical and chemical descriptions of the ingredients, tolerable levels of contaminants, and more. In an improvement to the design of the supplements, each monograph is presented in its entirety, with a boxed explanatory section, so users do not need to return to the main volume to understand the revisions. The supplement will be of interest to producers and users of food chemicals, including processed-food manufacturers, food technologists, quality control chemists, research investigators, teachers, students, and others involved in the technical aspects of food safety.

The Food Chemicals Codex is the accepted standard for defining the quality and purity of food chemicals. It is frequently referenced by the U.S. Food and Drug Administration and international food regulatory authorities. This First Supplement to the Fifth Edition provides revisions and updates, and reports on changes in tests, monographs, and assays to the Fifth Edition.
