pythagorean Theorem Problem

Solving A B

[SOLVED] What is the greatest common factor of 1 and 2?

The gcd is a multiplicative function in the following sense: if a_1 and a_2 are relatively prime, then $\gcd(a_1 a_2, b) = \gcd(a_1, b) \gcd(a_2, b)$. In particular, recalling that

Read Book Greatest Common Factor 2 1

gcd is a positive integer valued function we obtain that $\gcd(a, b, c) = 1$ if and only if $\gcd(a, b) = 1$ and $\gcd(a, c) = 1$.

Greatest common divisor - Wikipedia

The greatest common factor of this expression is 4. Having 4 as the greatest common factor of this expression we can

Read Book Greatest Common Factor 2 1

factorize this expression as: $4(x + 4y + 5x)$ Let's consider another example of factoring an expression. For example, you have to factorize $2x^2 - 6x - 18x$. The greatest common factor of this expression is $2x$.

Calculator And Problem

The first step to find the gcf of 1, 2 and 2 is to list the factors of each number. The factors of 1 are 1 and 1. The factors of 2 are 1 and 2. The factors of 2 are 1 and 2. So, the Greatest Common Factor for these numbers is 1 because it divides all them without a remainder. Read more about
