Place your casting frame around the shape(s) and tube on the board. Fill it with sand, packing tightly. Remove the tube (or "sprue"), flip over and remove the molds. Pack the other half of the casting frame with sand. Place over the first half and secure. Turn over so your sprue (casting tube hole) is on top; this is where you will pour your metal.

Other tools and equipment necessary for metal casting include a furnace, mold boxes, a hand ramming tool, crucible tongs, a vent wire rod, a hand sieve, and water spray. Casting grains such as green sand or clay enables you to create the mold for the molten metal. Common metals for casting include zinc, copper, tin, aluminum, and silver.

~~Guide to DIY Metal Casting - Alans Factory Outlet~~

Split the mold and remove everything and you will have the two halves of the mold! Clean out things that aren't needed such as a little flash where the runners went together since these will impede the flow of metal. Next step is to cast metal. Cover both sides of the mold with Baby powder and shake out the excess; this will help the metal flow.

~~How I cast small metal parts in rubber molds - Joe's ...~~

A casting service takes your mold and can duplicate it as many times as you'd like using a similar casting process to what was just described. Cost depends on a number of variables such as the type of metal, size of the item, number of jewelry pieces you want to cast, and whether you want them to be completely finished - file, cleaned, and polished - or if you plan to do that yourself.

~~How to Make Metal Charms With Casting Services~~

Measure out the width and height of the object you're going to mold, then add at least 1" to the width. The height just needs to be a fair amount taller, no specific amount. Measure and cut four sides and a bottom piece to make a box that fits your item. Hot glue the item to the bottom piece, then add the side panels with glue also.

~~How to Mold and Cast an Action Figure (or Anything Else ...~~

Create a funnel to pour metal into the mold. The funnel should lead directly to the model, as this is how the metal will be poured in the mold. Cut the clay in straight lines approximately 3/4 inch away from the model. Make sure you cut directly against the top of the funnel, as it must be on the edge of the mold so you can pour the metal.
