Written as an authoritative introduction, this text describes the technology of digital television broadcasting. It gives a thorough technical description of the underlying principles of the DVB standard following the logical progression of signal processing steps, as well as COFDM modulation, source and channel coding, MPEG compression and multiplexing methods, conditional access and set-top box technology. If you are looking for a concise technical 'briefing' that will quickly get you up to speed with the subject without getting lost in the detail - this is the book you need. After an overview of analogue TV systems and video digitization formats, the author then examines the various steps of signal processing - taken in order from transmission to reception - to facilitate an understanding of the architecture and function of the main blocks of the Integrated Receiver/Decoder (IRD) or 'set-top' box. Hervé Benoit focuses attention on the very complex problems that need to be solved in order to define reliable standards for broadcasting digital pictures to the consumer and gives solutions chosen for the current DVB system. * Enhance your knowledge of digital television with this authoritative technical introduction * Learn the underlying principles of DVB standard, COFDM modulation, compression, multiplexing, conditional access and set-top box technology * A concise technical 'briefing' that brings you up to speed with the subject.

Discover the secret of reigning over every adversity, lack and destructive habit that is limiting you from experiencing the success, wholeness and victory that you were destined to enjoy. Find out how it is not about what you have to do, but what has already been done. It is not about what you must accomplish, but what has already been accomplished for you. It is not about using your will power to effect change, but His power changing you. Start reigning over sickness, financial lack, broken relationships and destructive habits today!

The history of television in Chicago begins with the birth of the medium and is defined by the city's pioneering stations. WBKB (now WLS-TV) was the principal innovator of the Chicago School of Television, an improvisational production style that combined small budgets, personable talent, and the creative use of scenery and props. WNBO (now WMAQ-TV) expanded the innovative concept to a wider audience via the NBC network. WGN-TV scored with sports and kids. Strong personalities drove the success of WBDM-TV. A noncommercial educational station, WTTW, and the city's first UHF station, WCJU, added diversity and ethnic programming. The airwaves in Chicago have been home to a wealth of talented performers and iconic programs that have made the city one of the country's greatest television towns. Chicago Television, featuring photographs from the archives of the Museum of Broadcast Communications (MBC) and the collections of local stations and historians, gives readers a front-row seat on a journey through the first 50 years of Chicago television, 1940-1990. Founded in 1982 by broadcaster Bruce DuMont, the MBC Web site offers over 10,000 digital assets.

Frequently it is suggested that the 'golden age' of television was during the period 1950-1960. It is true that television almost ruined Hollywood's fortunes during this period. But if this was the authentic golden age, then it was an age of black and white, somewhat limited creativity, poor reception, lack of competition (except in the United States) and — by and large — public service broadcasting. However, if we take 1950 as a generic 'starting point' for modern television broadcasting, then we talk about a kind of prehistoric stage of the medium — in which it remained for the best part of three decades. The younger days of broadcasting were the 1980s; the time when commercial television started on a large scale and, in this youth, was getting younger in terms of programming. Luxembourg-based SES Astra appeared on the scene at exactly this time. Astra was instrumental in the dramatic developments in television that we have witnessed since then. This is the story we want to tell in this book. Without satellite technology and the success of satellite reception, without the resulting mass-market penetration of television sets and general economic prosperity we would not have the necessary base ingredients to make the great leap forward into digital, into HDTV, 3D-television, and the prospects of Ultra High Definition now in sight.

Nineteenth-century Muslim peddlers arrived at Ellis Island, bags heavy with embroidered silks from their villages in Bengal. Demand for "Oriental goods" took these migrants on a curious path, from New Jersey 's boardwalks into the segregated South. Bald 's history reveals cross-racial affinities below the surface of early twentieth-century America.

This publication identifies the role of digital infrastructure in achieving the Sustainable Development Goals (SDGs)—including education, employment, agricultural sustainability, food security, and spatial inequality—in 12 countries in Latin America and the Caribbean. It identifies a gap between the outcomes achieved for each SDG in the countries studied and those achieved in OECD countries. Moreover, the region still has a long way to go to achieve the SDG targets set in the 2030 Agenda for Sustainable Development. The authors explain how investment in digital infrastructure can help close the gaps between the region and these two benchmarks (OECD countries and SDG targets). They also quantify the investment in telecom in the region between 2008 and 2017 and estimate what amount is still needed to help close these gaps.

Since the early 2000s, Disney Channel has been dominated by original live-action programming popular among tween girls. The shows ' successes rely not only on their popularity among girl audiences, but also on the development of star personae by girl performers, such as Raven-Symon é, Miley Cyrus, and Selena Gomez. In addition, these programs and their performers have spawned lucrative media and merchandising franchises for the Walt Disney Company. This book includes analyses of this Disney Channel programming, as well as Disney corporate reports and executive statements, together with Disney Channel stars ' performances, promotional appearances, media production, philanthropic efforts, and entrepreneurship. Analyzing these texts, performances, activities, and personae, it considers the ways in which they reproduce celebrity, visibility, and feminine performativity as central to successful twenty-first century girlhood.

This second edition of a well-received text, with 20 new chapters, presents a coherent and unified repository of recommender systems ' major concepts, theories, methodologies, trends, and challenges. A variety of real-world applications and detailed case studies are included. In addition to wholesale revision of the existing chapters, this edition includes new topics including: decision making and recommender systems, reciprocal recommender systems, recommender systems in social networks, mobile recommender systems, explanations for recommender systems, music recommender systems, cross-domain recommendations, privacy in recommender systems, and semantic-based recommender systems. This multi-disciplinary handbook involves world-wide experts from diverse fields such as artificial intelligence, human-computer interaction, information retrieval, data mining, mathematics, statistics, adaptive user interfaces, decision support systems, psychology, marketing, and consumer behavior. Theoreticians and practitioners from these fields will find this reference to be an invaluable source of ideas, methods and techniques for developing more efficient, cost-effective and accurate recommender systems.
