resources (materials) and the movement doesn't add value to the product. Excessive movement of materials can be costly to your business and cause damage to quality.

7 Wastes of Lean: How to Optimize Resources

The first step to reducing waste is recognizing that they exist and having an effective process for identifying them. Value Stream Mapping (VSM) is a Lean management method for analyzing the current state and designing a future state. It shows the flow of information and material as they occur.

In most cases, lean process improvement emphasizes not only the prevention of waste but the elimination of existing waste. Rather than adding processes, or trying to manage existing processes, you have to first reduce waste. That means targeting time, labor and materials that are not being used effectively or are wasted.

This edited book discusses lean production as a suitable platform for global development by developing systems and products in a quicker, costless and sustainable way and educate people for a lean consumption. Lean thinking principles are totally and synergistically aligned with a lot of disciplines and current issues such as logistic, supply chain, construction, healthcare, ergonomics, education, project management, leadership, coaching, startup, product development, farming and sustainable development. Lean-Green is particularly related to this last issue, sustainable development, the first global challenge for humanity that are

Lean Principles totally connected to all remaining 14 global challenges because they are interdependent. Attaining these challenges could bring solutions for the 17 Sustainable Development Goals. Lean Production and Consumption have an important role in providing these solutions, by systematically reducing wastes in all activities performed, and at the same time, instruct people in having a lean consumption. The target audience primarily comprises research experts in lean management, but the book may also be beneficial for practitioners alike.

(ii) emerging developments and related technology, and (iii) potential for the commercialization of techniques specific to manufacturing of materials. The first half of the book provides the interested reader with detailed chapters specific to the manufacturing of emerging materials, such as additive manufacturing, with a valued emphasis on the science, technology, and potentially viable practices specific to the manufacturing technique used. This section also attempts to discuss in a lucid and easily understandable manner the specific advantages and limitations of each technique and goes on to highlight all of the potentially viable and emerging technological applications. The second half of this archival volume focuses on a wide spectrum of conventional techniques currently available and being used in the

Most companies are continuously trying to reduce their supply-chain costs, time to market, and inventory. *Optimizing Your Supply-Chain Performance: How to Assess and Improve Your Company's Strategy and Execution Capabilities* presents the "how-to's" (and a few "how-NOT-to's"!) for conducting assessments of companies' supply chains as well as identifying areas for improvement. It covers techniques, tools, and methodologies for evaluating current working methods (current state) versus industry best practices and operational optimization. It identifies performance gaps and suggests planning and implementing improved ways of working (the future and ideal states). With a collection of approximately 40 case-in-point examples of supply-chain transformation across a wide array of industries including Fortune 1000 companies

This book constitutes the refereed post-conference proceedings of the 6th International Conference on Advancement of Science and Technology, ICAST 2018, which took place in Bahir Dar, Ethiopia, in October 2018. The 47 revised full papers were carefully reviewed and selected from 71 submissions. The papers present economic and technologic developments in modern societies in five tracks: agro-processing industries for sustainable development, water resources development for the shared vision in blue Nile basin, IT and computer technology innovation, recent advances in electrical and computer engineering, progresses in product design and system optimization.
