ABOUT THE PART New Holland L553 Skid Steer, Drive Shaft for the Single Drive Pump, Gear Pump End For the Drive Pump closest to the Gear Pump. Portions of the part information on this page have been provided by WHI Solutions, Inc.

The competition for Pamphlet Architecture 32 centered on the theme of resilience. By addressing the capacity to cope, the ability to bounce back, and the mitigation and management of risk, participants were asked to showcase a fresh understanding of the architectural opportunities found in resilience. The winning entry successfully takes on the topic through an investigation of the ravaged city of Warsaw, Poland. By identifying, interrogating, and ultimately reinforcing both the physical and immaterial conditions of the landscape, the project allows the space to become something new and yet hold on to what it is, truly exhibiting resilience.

This work has been selected by scholars as being culturally important, and is part of the knowledge base of civilization as we know it. This work was reproduced from the original artifact, and remains as true to the original work as possible. Therefore, you will see the original copyright references, library stamps (as most of these works have been housed in our most important libraries around the world), and other notations in the work. This work is in the public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work. As a reproduction of a historical artifact, this work may contain missing or blurred pages, poor pictures, errant marks, etc. Scholars believe, and we concur, that this work is important enough to be preserved, reproduced, and made generally available to the public. We appreciate your support of the preservation process, and thank you for being an important part of keeping this knowledge alive and relevant.

The recent development of high power lasers, delivering femtosecond pulses of 10^{20} intensities up to 10 W/cm^2 , has led to the discovery of new phenomena in laser interactions with matter. At these enormous laser intensities, atoms, and molecules are exposed to extreme conditions and new phenomena occur, such as the very rapid multi photon ionization of atomic systems, the emission by these systems of very high order harmonics of the exciting laser light, the Coulomb explosion of molecules, and the acceleration of electrons close to the velocity of light. These phenomena generate new behaviour of bulk matter in intense laser fields, with great potential for wide ranging applications which include the study of ultra-fast processes, the development of high-frequency lasers, and the investigation of the properties of plasmas and condensed matter under extreme conditions of temperature and pressure. In particular, the concept of the "fast ignitor" approach to inertial confinement fusion (ICF) has been proposed, which is based on the separation of the compression and the ignition phases in laser-driven ICF. The aim of this course on "Atom, Solids and Plasmas in Super-Intense Laser fields" was to bring together senior researchers and students in atomic and molecular physics, laser physics, condensed matter and plasma physics, in order to review recent developments in high-intensity laser-matter interactions. The course was held at the Ettore Majorana International Centre for Scientific Culture in Erice from July 8 to July 14, 2000.

Apple's new Photos app lets you do a whole lot more than simply store and edit pictures and videos on a Mac or iOS device. With this comprehensive guide, you'll learn how to import, organize, and share your digital memories, as well as how to improve, print, and use your photos in creative projects. With Lesa Snider's step-by-step instructions and expert advice, you'll master Photos and tame your image library—and have fun along the way! The important stuff you need to know: Migrate from iPhoto. Learn how to make a quick and smooth transition. Organize your collection with ease. Master the many ways to import, group, and categorize images—and set up iCloud Family Sharing. Find your photos quickly. Employ Photos' powerful labeling, keyword and facial recognition features to optimize searches. Sharpen your editing skills. Skillfully use Photos' impressive image- and video-editing tools on your Mac or iOS device. Access photos anywhere. Sync your library to all of your Apple devices so your photos travel with you wherever you go. Share them online. Show your shots to everyone on your list by using shared albums, creating web galleries, posting them on Facebook, and more. Dive into creative projects. Build pro-level slideshows to share with others, and create gorgeous gift books, calendars, and cards.

In the last two decades low-dimensional (low-d) physics has matured into a major branch of science. Quite generally we may define a system with restricted dimensionality d as an object that is infinite only in one or two spatial directions ($d = 1$ and 2). Such a definition comprises isolated single chains or layers, but also fibres and thin layers (films) of varying but finite thickness. Clearly, a multitude of physical phenomena, notably in solid state physics, fall into these categories. As examples, we may mention: □ Magnetic chains or layers (thin-film technology). □ Metallic films (homogeneous or heterogeneous, crystalline, amorphous or microcrystalline, etc.). □ 1-d or 2-d conductors and superconductors. □ Intercalated systems. □ 2-d electron gases (electrons on helium, semiconductor interfaces). □ Surface layer problems (2-d melting of monolayers of noble gases on a substrate, surface problems in general). □ Superfluid films of ^4He or ^3He . □ Polymer physics. □ Organic and inorganic chain conductors, superionic conductors. □ 1-d or 2-d molecular crystals and liquid crystals. □ 1-d or 2-d ferro- and antiferro electrics.
