This book deals with a hospital's struggle to secure and maintain financial stability. In the story, the leadership team of a fictional hospital adopts the tools and principles associated with the Toyota Production System or Lean. The story takes the reader through leadership's arduous journey from rejecting the methodology to embracing it, to successful implementation. This book is important because many of our nation's hospitals are besieged with financial difficulties with declining reimbursement and the public is losing confidence in our hospital's ability to provide quality care without error. Lean can provide relief from these issues but only if it is properly implemented.

"Reengineering Health Care" gets to the core of transforming our current system by advocating the widespread use of IT, eliminating inefficient practices, and keeping the system focused on a healthy individual and not on a broken process."--Newt Gingrich, Founder of the Center for Health Transformation, and former Speaker of the U.S. House of Representatives "This book is a prescription for streamlining health care. Using the techniques that have successfully

transformed business into customer-focused and efficient organizations, the authors provide a step-by-step approach to improving health care processes, guiding health care into the next generation of Lean delivery systems."--Dr. John Halamka, Chief Information Officer, Beth Israel Deaconess Medical Center "In health care, we tend to inundate our people with information, rather than enabling them to have insights. This concise guide will resonate with both senior and front-line managers who know they're engaged in unproductive work. They will see that reengineering is not overly difficult and can enable them to improve patient care and efficiency."--Trevor Fetter, President and CEO, Tenet Health Corporation, and Trustee, Federation of American Hospitals "It isn't reform that will fix our ailing health care system, its reengineering. Champy and Greenspun highlight organizations that have transformed, and reinvented, themselves by reengineering care delivery—they've lowered costs, improved care quality and patient safety, and increased the satisfaction of those giving and receiving care. Every clinician, hospital executive, and politician should read this book."--Bill Crouse, M.D., Senior Director, Worldwide Health, Microsoft Corporation "Implement health care technology, and you have better health care tools; reengineer with a focus on technology, process, and people, and you have a better health care system. This straightforward

guide shows how to transform health care to maximize quality, safety, convenience, and impact the cost of delivery. No one can read this book and not feel a profound call to action."--H. Stephen Lieber, CAE, President & CEO, HIMSS In their legendary book, "Reengineering the Corporation", Jim Champy and Michael Hammer introduced businesspeople to the enormous power of a revolutionary methodology called "reengineering". Using reengineering, businesses around the world have systematically retooled their processes--achieving dramatic cost savings, greater customer satisfaction, and more value. Now, Jim Champy and Dr. Harry Greenspun show how to apply the proven reengineering methodology in health care: throughout physician practices, hospitals, and even entire health systems. You'll meet innovative and visionary leaders who've been successfully reengineering organizations across the entire delivery spectrum and learn powerful lessons for improving quality, reducing costs, and expanding access. This book doesn't just demonstrate the immense potential of health care reengineering to revolutionize health care delivery: "it offers a clear roadmap for realizing that potential in your own organization"." Deliver Better Care to More People, at Lower Cost How reengineering can lead to more efficient, safer delivery--and sharply reduced costs How to focus on prevention and wellness, as well as chronic disease and hospital care How to earn the trust,

"Command and Control is failing us. There is a better way to design and manage work - a better way to make work work - but it remains unknown to the vast majority of managers." An adherent of the Toyota Production System, John Seddon explains how traditional top-down decision making within service organizations leads to managers who are detached from employees and remote from operations. He demonstrates that decision-making based on purpose-related measures (such as putting customers first and improving services) can help managers reconnect with operations, see waste, and exploit opportunities for improvement. Through extensive case material, he differentiates between command and control and systems thinking and illustrates how the latter leads to improved service, revenues, and staff morale. He also posits that the service industry is fundamentally different from

Offering a comprehensive classification of the analytical approaches to the social within the fields of innovation and entrepreneurship studies, this book showcases a wide variety of perspectives and a collection of theoretical analysis tackling social complexity.

Rapid change is constant in the healthcare industry, leaving hospitals—and the units within—to react and adapt. Unfortunately, the typical shared (professional) governance structure fails to address the challenges of modern healthcare systems, both in efficiency and ability to maintain long-term change. As a result, change in healthcare is often met with roadblocks and resistance. Rethinking Your Unit Council Structure applies the innovative FLIGHT Model of risk and change to:

- Determine your unit's immediate needs
- Empower team members to identify problems and initiate solutions
- Transcend elements of traditional unit council structures that hinder progress
- Improve staff engagement and satisfaction

This book provides a solutions-based approach to determining and addressing the unique

diagnosed with the knowledge needed to reverse their Parkinson's disease symptoms and even recover, using completely natural means. Rethinking Parkinson's Disease traces known pathways leading to a diagnosis of Parkinson's disease, together with strategies to reverse each pathway. It includes the best evidence from Western allopathic medicine and complementary/alternative medicine in discovering how and why people with Parkinson's develop symptoms, the diagnostic process, standard treatments and prognoses offered by expert practitioners, and ongoing research. The book presents strategies that have been shown, clinically or in research, to improve the health of people with Parkinson's, with the possibility of reversing symptoms. A major section of this work details strategies to create wellness, many available to patients at little or no cost. There are sections on symptom control, complementary medical treatments and therapies to avoid. The book is aimed primarily at people with Parkinson's, families and supporters, and may be used as a self-help book, including advice on building a team of supportive practitioners. There are also suggestions and advice for both Western allopathic medicine and complementary/alternative medicine practitioners to enhance their care of patients with a Parkinson's disease diagnosis, so it may be used as a handbook for practitioners wishing to move away from the standard conservative view of Parkinson's disease as an "incurable"

The vast majority of healthcare is provided safely and effectively. However, just like any high-risk industry, things can and do go wrong. There is a world of advice about how to keep people safe but this delivers little in terms of changed practice. Written by a leading expert in the field with over two decades of experience, Rethinking Patient Safety provides readers with a critical reflection upon what it might take to narrow the implementation gap between the evidence base about patient safety and actual practice. This book provides important examples for the many professionals who work in patient safety but are struggling to narrow the gap and make a difference in their current situation. It provides insights on practical actions that can be immediately implemented to improve the safety of patient care in healthcare and provides readers with a different way of thinking in terms of changing behavior and practices as well as processes and systems. Suzette Woodward shares lessons from the science of implementation, campaigning and social movement methods and offers the reader the story of a discovery. Her team has explored an approach which could profoundly affect the safety culture in healthcare; a methodology to help people talk to each other and their patients and to listen through facilitated safety conversations. Although project management is a newly recognised profession, it deals with a number of significant challenges. We seem to operate in an unprecedented environment, rife with change, innovation and turbulence. Moreover, projects by their very nature tend to push boundaries, encourage novelty and demand engagement with the uncertain and the unknown. Indeed, projects reflect our organised impulse to constantly amend, shape, improve and refine our context. So how can future projects overcome the challenges? Rethinking Project Management for a Dynamic and Digital World makes a powerful and original statement equipping project leaders and managers with new approaches and frameworks for an increasingly demanding world where the traditional methods, models and mindsets no longer suffice. The book explores new trends, promising ideas and novel concepts and distils the fundamentals for marshalling a world concerned with people, communities and value by deploying innovation, rethinking purpose and acting responsibly. An increasingly borderless, upwardly mobile and entrepreneurial society requires a revamped and revitalised project perspective that is more dynamic, adaptive and reflective. This volume brings together some of the best writing by leading authorities on many key topics, including benchmarking, lean quality, communicating,

teams and teamwork, followership, organising for project work, project frameworks, agile working, project portfolios, strategic initiatives, strategic alignment, trust, entrepreneurship, putting people first, social processes, positive organisations, rethinking progress, the hacker paradigm, community, stewardship and knowledge management.
