In 1991, French public television held an amateur screenwriting contest. When Sabine Chalvon-Demersay, a French sociologist, examined the roughly 1,000 entries, she had hoped to analyze their differences. What she found, however, surprised her. Although the entrants covered nearly every social demographic, their screenplays presented similar characters in similar situations confronting similar problems. The time of crisis presented by the amateur writers was not one of war, famine, or disease—it was the millennial dilemma of representation. In a world plagued by alienation, individualization, and a lack of mobility, how can members of a society combat their declining senses of self? Although the contestants wrote about life in France, their concerns and struggles have a distinctly universal ring. A lucid, witty writer, Chalvon-Demersay offers a clear, if still developing, photograph of the contemporary imagination.

An updated edition of the classic reference on the dynamics of road and off-road vehicles As we enter a new millennium, the vehicle industry faces greater challenges than ever before as it strives to meet the increasing demand for safer, environmentally friendlier, more energy efficient, and lower emissions products. Theory of Ground Vehicles, Third Edition gives aspiring and practicing engineers a fundamental understanding of the critical factors affecting the performance, handling, and ride essential to the development and design of ground vehicles that meet these requirements. As in previous editions, this book focuses on applying engineering principles to the analysis of vehicle behavior. A large number of practical examples and problems are included throughout to help readers bridge the gap between theory and practice. Covering a wide range of topics concerning the dynamics of road and off-road vehicles, this Third Edition is filled with up-to-date information, including:

- * The Magic Formula for characterizing pneumatic tire behavior from test data for vehicle handling simulations
- * Computer-aided methods for performance and design evaluation of off-road vehicles, based on the author's own research
